

Cloud Guardrails Implementation

Proactive Policy Enforcement and Real-Time Compliance Monitoring

Cloud Guardrails Implementation

68% of cloud security failures are caused by misconfigurations and policy violations

Cloud environments expand rapidly, and manual oversight cannot keep pace with the velocity of change. Without automated guardrails, organizations face continuous compliance drift, security gaps, and policy violations that go undetected until they become incidents. Plurilock delivers comprehensive Cloud Guardrails Implementation services that provide real-time visibility into policy violations and automated enforcement across your entire cloud environment—allowing teams the freedom to innovate while ensuring continuous compliance and security.

Our guardrails approach combines continuous monitoring, unified policy enforcement, and proactive prevention to detect violations before they escalate and automatically remediate non-compliant configurations across all cloud accounts and providers.

Advisory and Assessment Services

Cloud Governance Foundation

Current Governance Posture Analysis

- Comprehensive evaluation of existing cloud policies and controls
- Identification of governance gaps and compliance risks
- Assessment of current enforcement mechanisms
- Multi-account and multi-cloud governance evaluation

Policy Framework Development

- Design of comprehensive guardrail policies aligned to security and compliance requirements
- Risk-based policy prioritization
- Control mapping across regulatory frameworks (NIST, CIS, PCI DSS, SOC 2, ISO 27001)
- Custom policy development for organizational requirements

Compliance Alignment Strategy

- Mapping of guardrails to compliance obligations
- Gap analysis against regulatory requirements
- Continuous compliance monitoring framework design

- Audit readiness and evidence collection planning

Real-Time Visibility and Monitoring

Continuous Policy Monitoring

Real-Time Violation Detection

- Immediate notification of policy violations as they occur
- Centralized visibility dashboard across all cloud accounts
- Severity-based alerting and escalation
- Automated violation tracking and trend analysis

Compliance Verification

- Continuous validation of compliance alignment across your environment
- Real-time compliance posture reporting
- Drift detection from approved configurations
- Automated evidence collection for audit purposes

Unified Visibility Platform

- Single pane of glass across all cloud accounts
- Multi-cloud visibility and monitoring
- Integration with existing SIEM and security operations tools
- Executive dashboards for compliance reporting

Automated Policy Enforcement

Intelligent Enforcement Engine

Proactive Prevention

- Prevent non-compliant actions before they occur
- Pre-deployment policy validation
- Infrastructure-as-code policy gates
- Real-time blocking of high-risk configurations

Automated Remediation

- Automatic correction of policy violations
- Configurable remediation workflows
- Balance between freedom and compliance
- Self-healing infrastructure capabilities

Safe Policy Testing

- Test policies in monitoring mode before enforcement
- Validate impact before production deployment
- Gradual rollout capabilities
- Policy simulation and impact analysis

Unified Multi-Cloud Enforcement

Cross-Account Governance

- Unified policy enforcement across all cloud accounts
- Centralized policy management
- Consistent controls across organizational units
- Account-level exception handling with audit trails

Multi-Cloud Support

- Unified approach across cloud providers (AWS, Azure, GCP)

- Platform-agnostic policy framework
- Consistent enforcement regardless of cloud platform
- Cross-cloud compliance reporting

Flexible Enforcement Models

- Configurable enforcement levels (monitor, alert, prevent)
- Risk-based enforcement strategies
- Emergency override capabilities with audit logging
- Time-based policy exceptions

Implementation and Integration

Guardrails Deployment

Platform Integration

- Integration with existing cloud management platforms
- CI/CD pipeline integration for policy-as-code
- ITSM and ticketing system integration
- Security operations center (SOC) integration

Policy Migration and Rollout

- Phased implementation approach
- Legacy policy migration strategies
- Stakeholder training and enablement
- Change management support

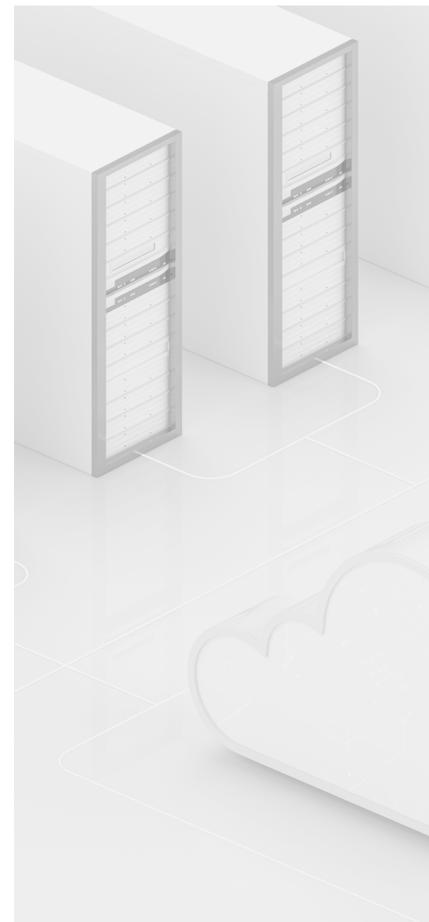

Continuous Optimization

- Regular policy effectiveness reviews

- Refinement based on violation patterns
- Emerging threat adaptation
- Cost optimization recommendations

Typical Assessment Deliverables

- Cloud governance assessment report with current state analysis
- Comprehensive guardrails policy framework
- Real-Time monitoring dashboard configuration
- Automated enforcement workflow documentation
- Multi-account and multi-cloud enforcement strategy
- Policy testing and validation plan
- Compliance mapping and evidence collection framework
- Implementation roadmap with phased rollout approach
- Training materials and runbooks
- Executive summary for leadership communication

Enable innovation while ensuring compliance.

Managed services

Plurilock Services

Zero Trust

Design and implementation of zero trust architectures (ZTAs)

Data Protection

Protection of intellectual property and digital assets

Identity and Access Management

Design, implementation, and integration of complete identity and access management (IAM)

Public Key Infrastructure

Design and implementation of modern public key infrastructure (PKI) deployments

Offensive Security

Security assessments and tests with a hacker mindset

Penetration Testing as a Service (PTaaS)

Managed service providing continuous penetration testing to rapidly surface emerging vulnerabilities

Data Protection as a Service (DPaaS)

Managed data protection service to operate DLP and insider threat capabilities as a service

Emergency Support

Immediate, cross functional team for urgent and high impact IT and cyber problems

Selection of current and past customers that can be publicly represented
